### Air-cooled Vibration Test Systems

# J250/EM5HAG

Long-duration shock tests require high velocity and large displacement. J-series is a high-frequency system that offers usability and durability while accommodating high velocity and displacement testing.

#### [Expanded maximum test range]

Maximum velocity of Sine force: 94 in/s, Maximum velocity of Shock force 137 in/s, Maximum displacement: 4.0 in-p  
[Patented upper (armature) support system PS Guide] Parallel Slope Guide is standard.  
[All models can be directly coupled to a climatic chamber.]

#### 1. High velocity and large displacement

High velocity of 94 in/s and large displacement of 4.0 in-p.

PS guide system

#### 2. Improvement of testing environment

With the use of Intelligence Shaker Management (ISM), EM range can reduce power consumption and CO2 emissions automatically.

#### 3. User first principle

Compatible with K2 vibration controller. Intuitive interface leads the operator with user-friendly guidance.

\*1 Random force ratings are specified in accordance with ISO5344 conditions. Please contact IMV or your local distributor with specific test requirements.  
\*2 Power supply: 3-phase 220/480 V, 60 Hz. A transformer is required for other supply voltages.

\*3 Breaker capacity for 480 V.

\*4 For high-velocity option

\*The alphabet of A, B, or C can be entered in □. A: Voltage AC200V system (200 to 230), B: Voltage AC400V system (380A to 440V), C: 480V system (480V to 520V)

\*For random vibration tests, please set the test definition of the peak value of acceleration waveform to operate at less than the maximum acceleration of shock.

\*Frequency range values vary according to the sensor and vibration controller.

\*Armature mass and acceleration may change when a chamber is added.
